

Abstract

Copolymers based on N-vinylamide as adjuvant and compositions for
5 the agrotechnical field

The present invention relates to specific copolymers based on
N-vinylamide and to their use as activity-improving adjuvant in
the agrotechnical field and in particular in the field of plant
10 protection. Appropriate agrotechnical compositions are likewise
described.

The copolymers are copolymers of vinylamides and ethylenically
unsaturated carboxylic acid esters which are alkoxyated.
